CLAIMS:

10

20

- 1. A light-transmitting substrate which is at least partly provided with a lightabsorbing coating, said coating comprising silver and/or gold particles that are incorporated in a sol-gel matrix, a blue-absorbing compound being added to the coating.
- 5 2. A light-transmitting substrate according to claim 1, characterized in that the blue-absorbing compound is present in an additional layer.
 - 3. A light-transmitting substrate according to claim 1, characterized in that the blue-absorbing compound is present in the substrate.
 - 4. A light-transmitting substrate according to claim 1, characterized in that the blue-absorbing compound comprises an inorganic compound.
- 5. A light-transmitting substrate according to claim 4, characterized in that the inorganic compound comprises Fe₂O₃, compounds with the general formula Zn_(1-x)Fe_(2+x)O₄, such as Zn Fe₂O₄, or V₂O₅.
 - 6. An electric lamp comprising a light-transmitting lamp vessel that accommodates a light source, said lamp vessel comprising a light-transmitting substrate according to one or several of claims 1-5.
 - 7. Light-absorbing coating according to one or several of claims 1-5.
